

Position Summary...

What you'll do...

Manager Advanced Analytics – Business Intelligence

The eCommerce Analytics team partners with the eCommerce Product and Strategy teams to build products that drive growth.

As the biggest player in the game, we trust our associates to innovate the future of shopping. If you are motivated by challenges and want to make a difference, we want you.

The role involves partnering very closely with multiple PMs, Engineers, Test Managers and Business Partners to drive product development.

What you'll do...

Working with engineering to implement, document, validate, and monitor logging and metrics. Craft simple and complex data models.

Identifying, translating, prioritizing, and informing important product questions with data.

Designing, building, and maintaining ETL pipeline of analytical data warehouse.

Exploring data to find actionable insights and make product recommendations through funnels, long-term trends, and other data-driven insights.

Designing and building intuitive dashboards and generate daily reports

Working with a collaborative team made up of engineering, UX, product management, along with web and mobile development.

Providing and supporting the implementation of business solutions applying data modeling, SQL, and data analysis.

Applying fluency in SQL, as well as a deep understanding of statistical analysis, and common pitfalls of data analysis.

Helping design and drive meaningful improvements and optimizations for the checkout experience. This position is a key role in the team.

You'll sweep us off our feet if...

You have experience working with large, complex, multi-dimensional datasets.

You have experience working with data ingestion techniques.

You have designed and developed ETL data pipelines.

You have experience standardizing and automating ETL processes using scripting and reporting to surface insights.

You have worked with Big Data and Hadoop technologies.

You have written Hive queries to pull data from complex data sources.

You have experience with data modeling and data warehousing.

You have experience with SQL, and you can demonstrate knowledge of statistical analysis and data analysis.

You have experience building dashboards using tools such as Tableau, Looker, Power BI etc.

You have experience automating manual reports to minimize manual efforts and optimizing dashboards to drive insights.

You have experience deep diving into data to find actionable insights and make product recommendations.
